

Zybo Z7-10 Lab Design Flow Overview

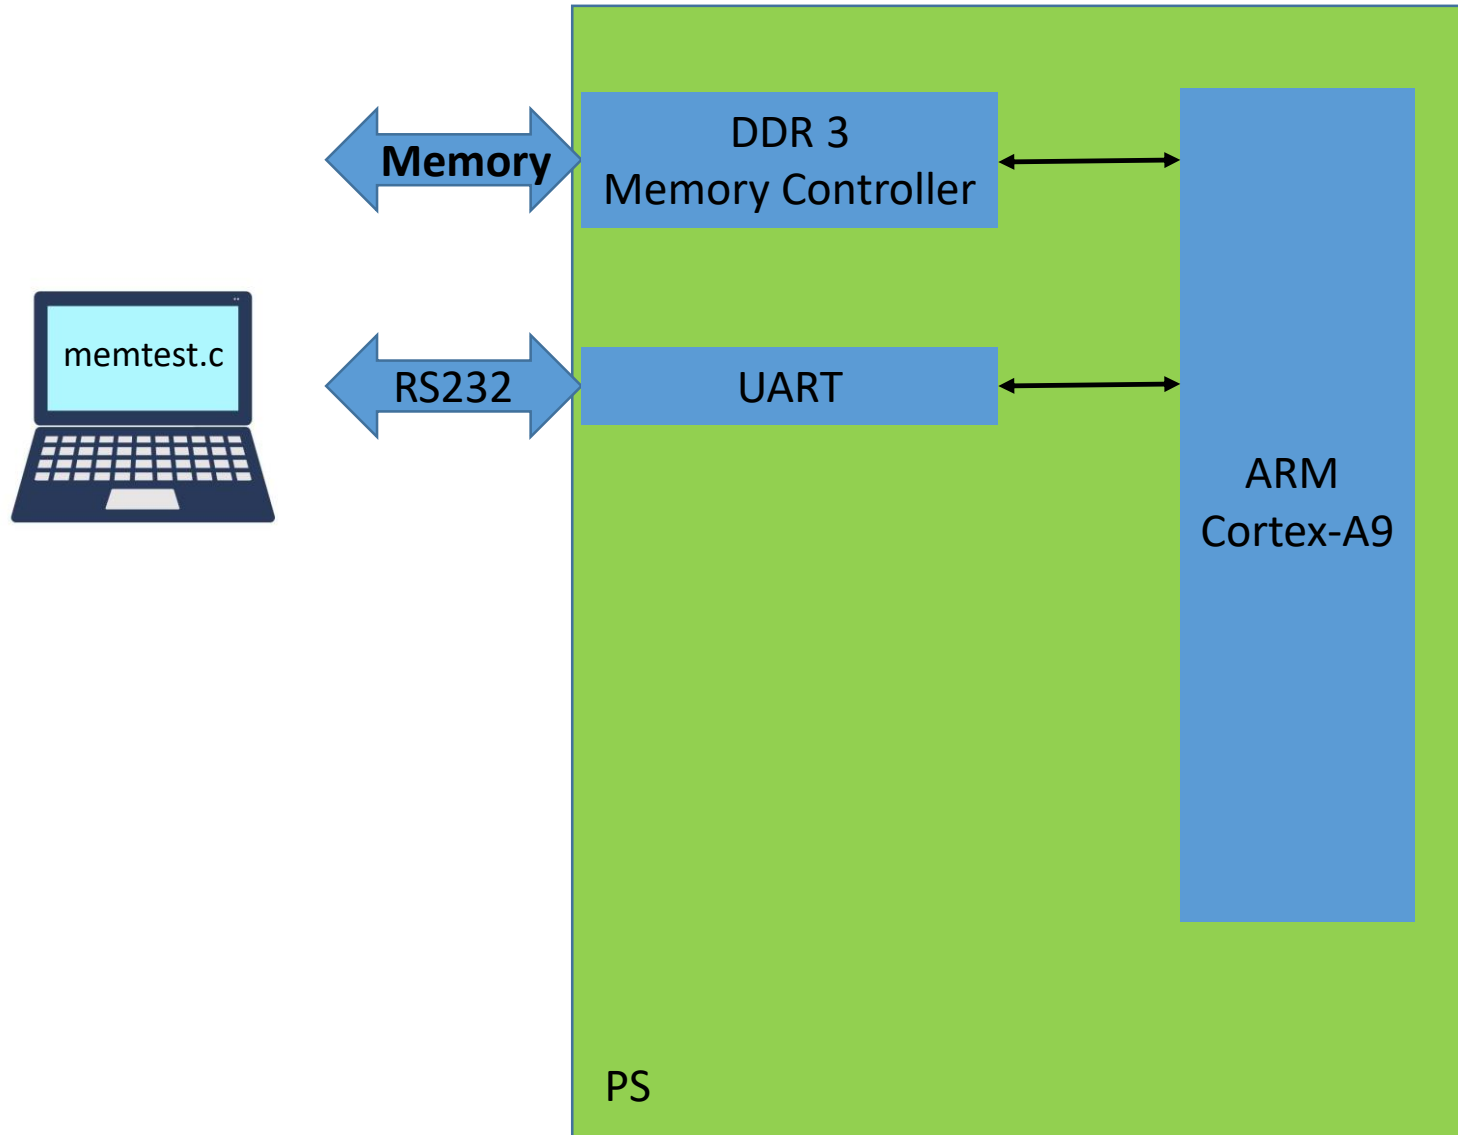

Xilinx Processing System and Programmable Logic Chip

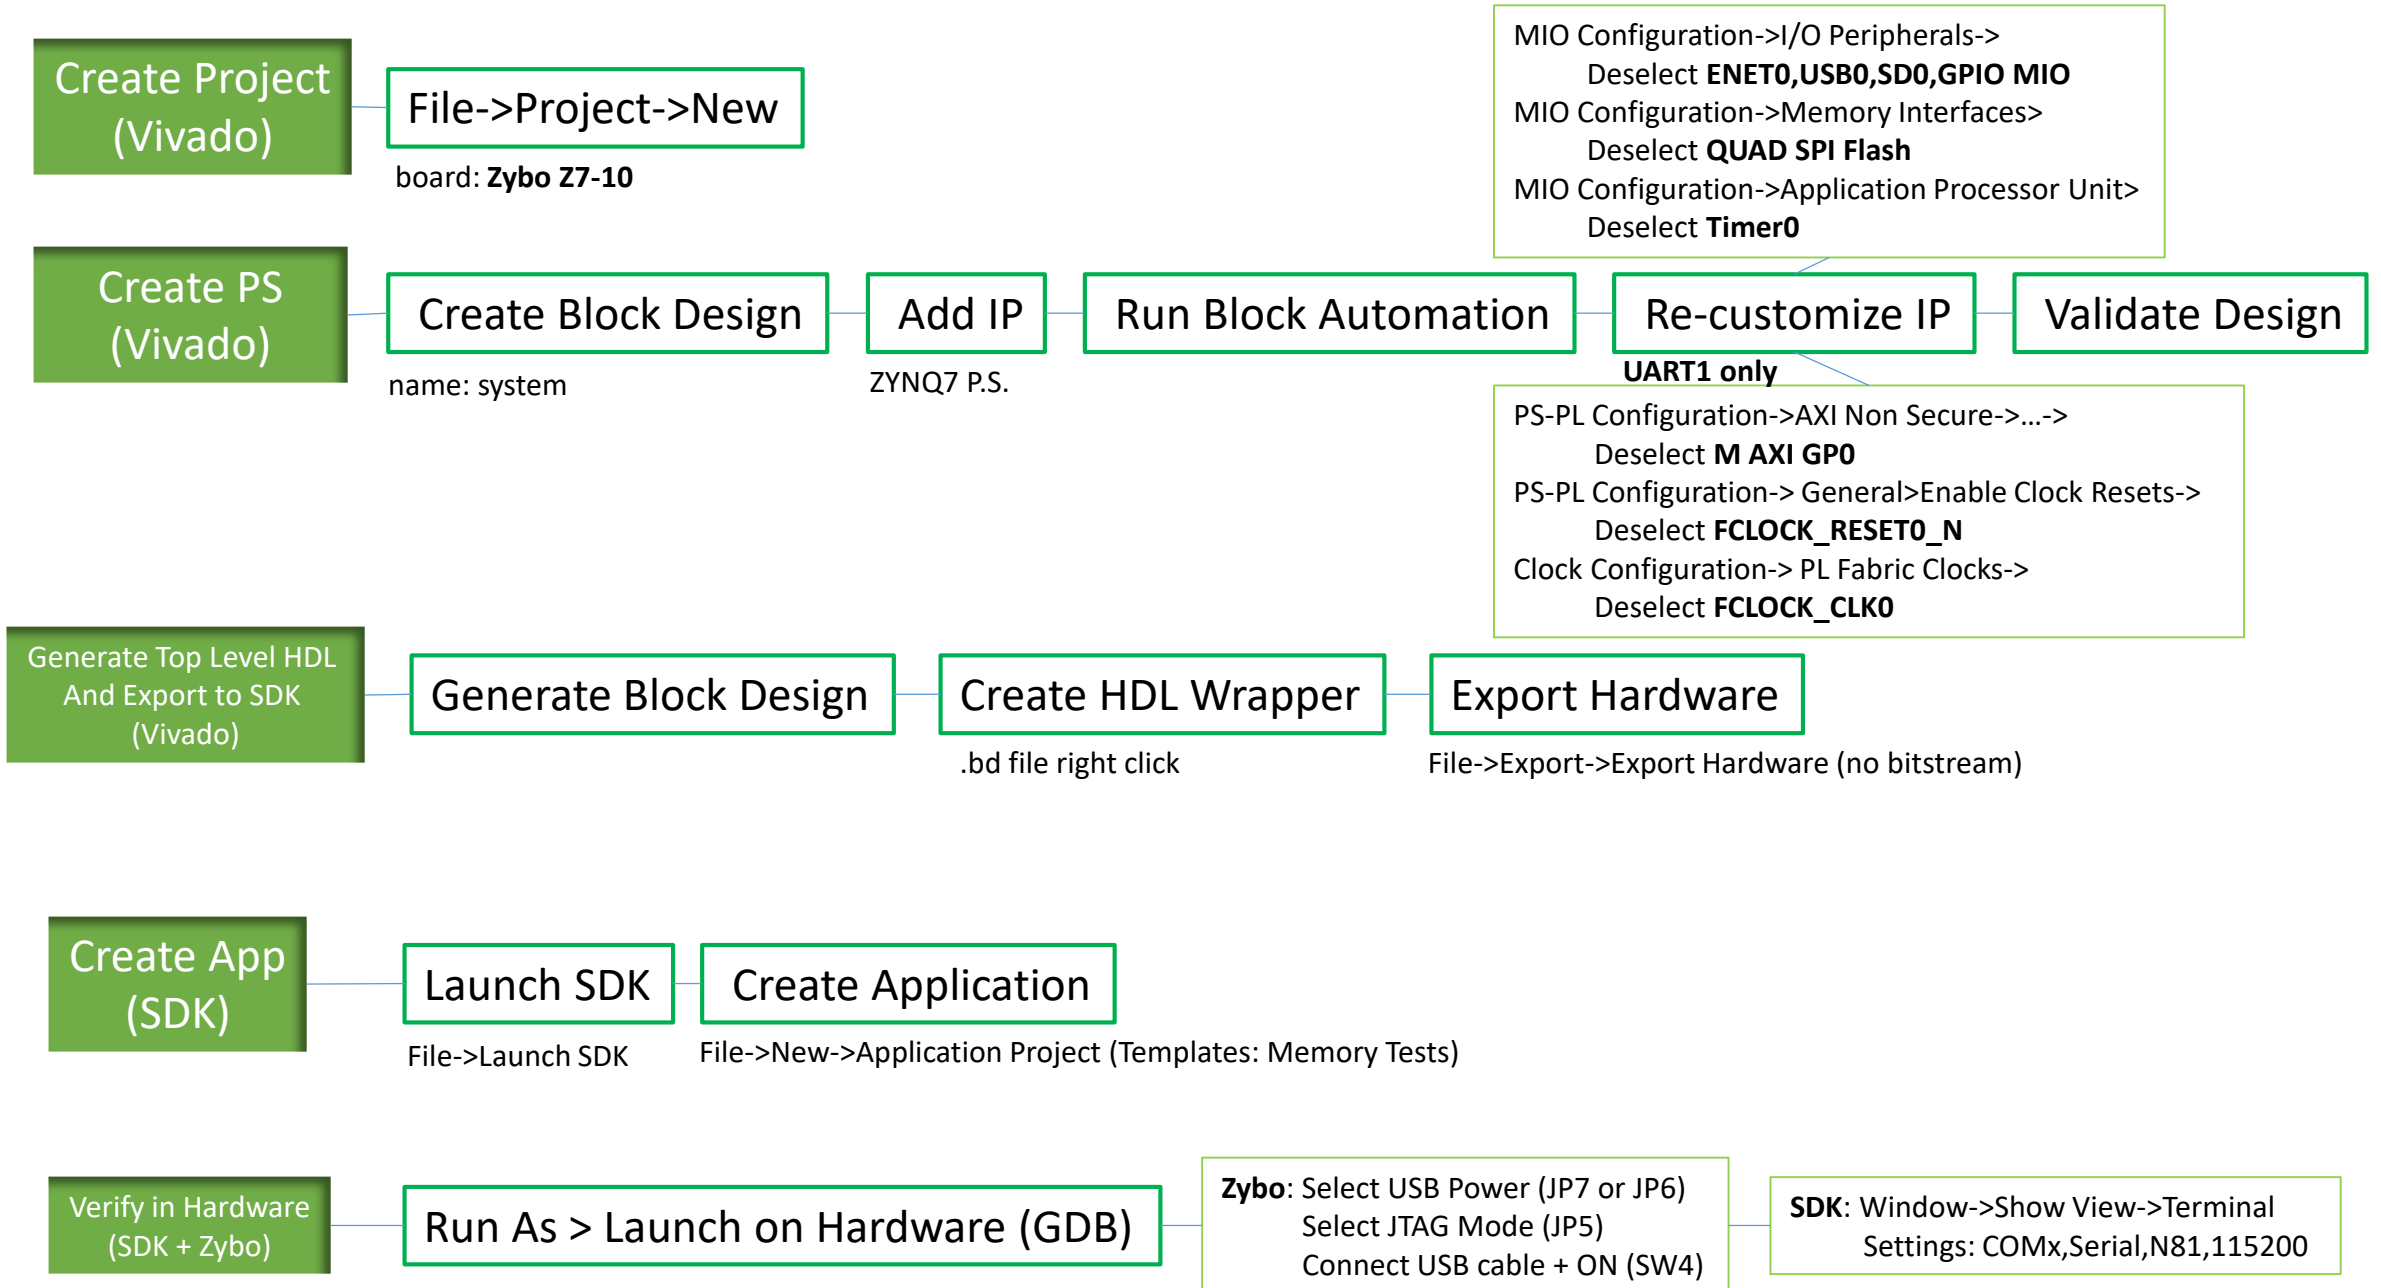

Zybo Z7-10 Board

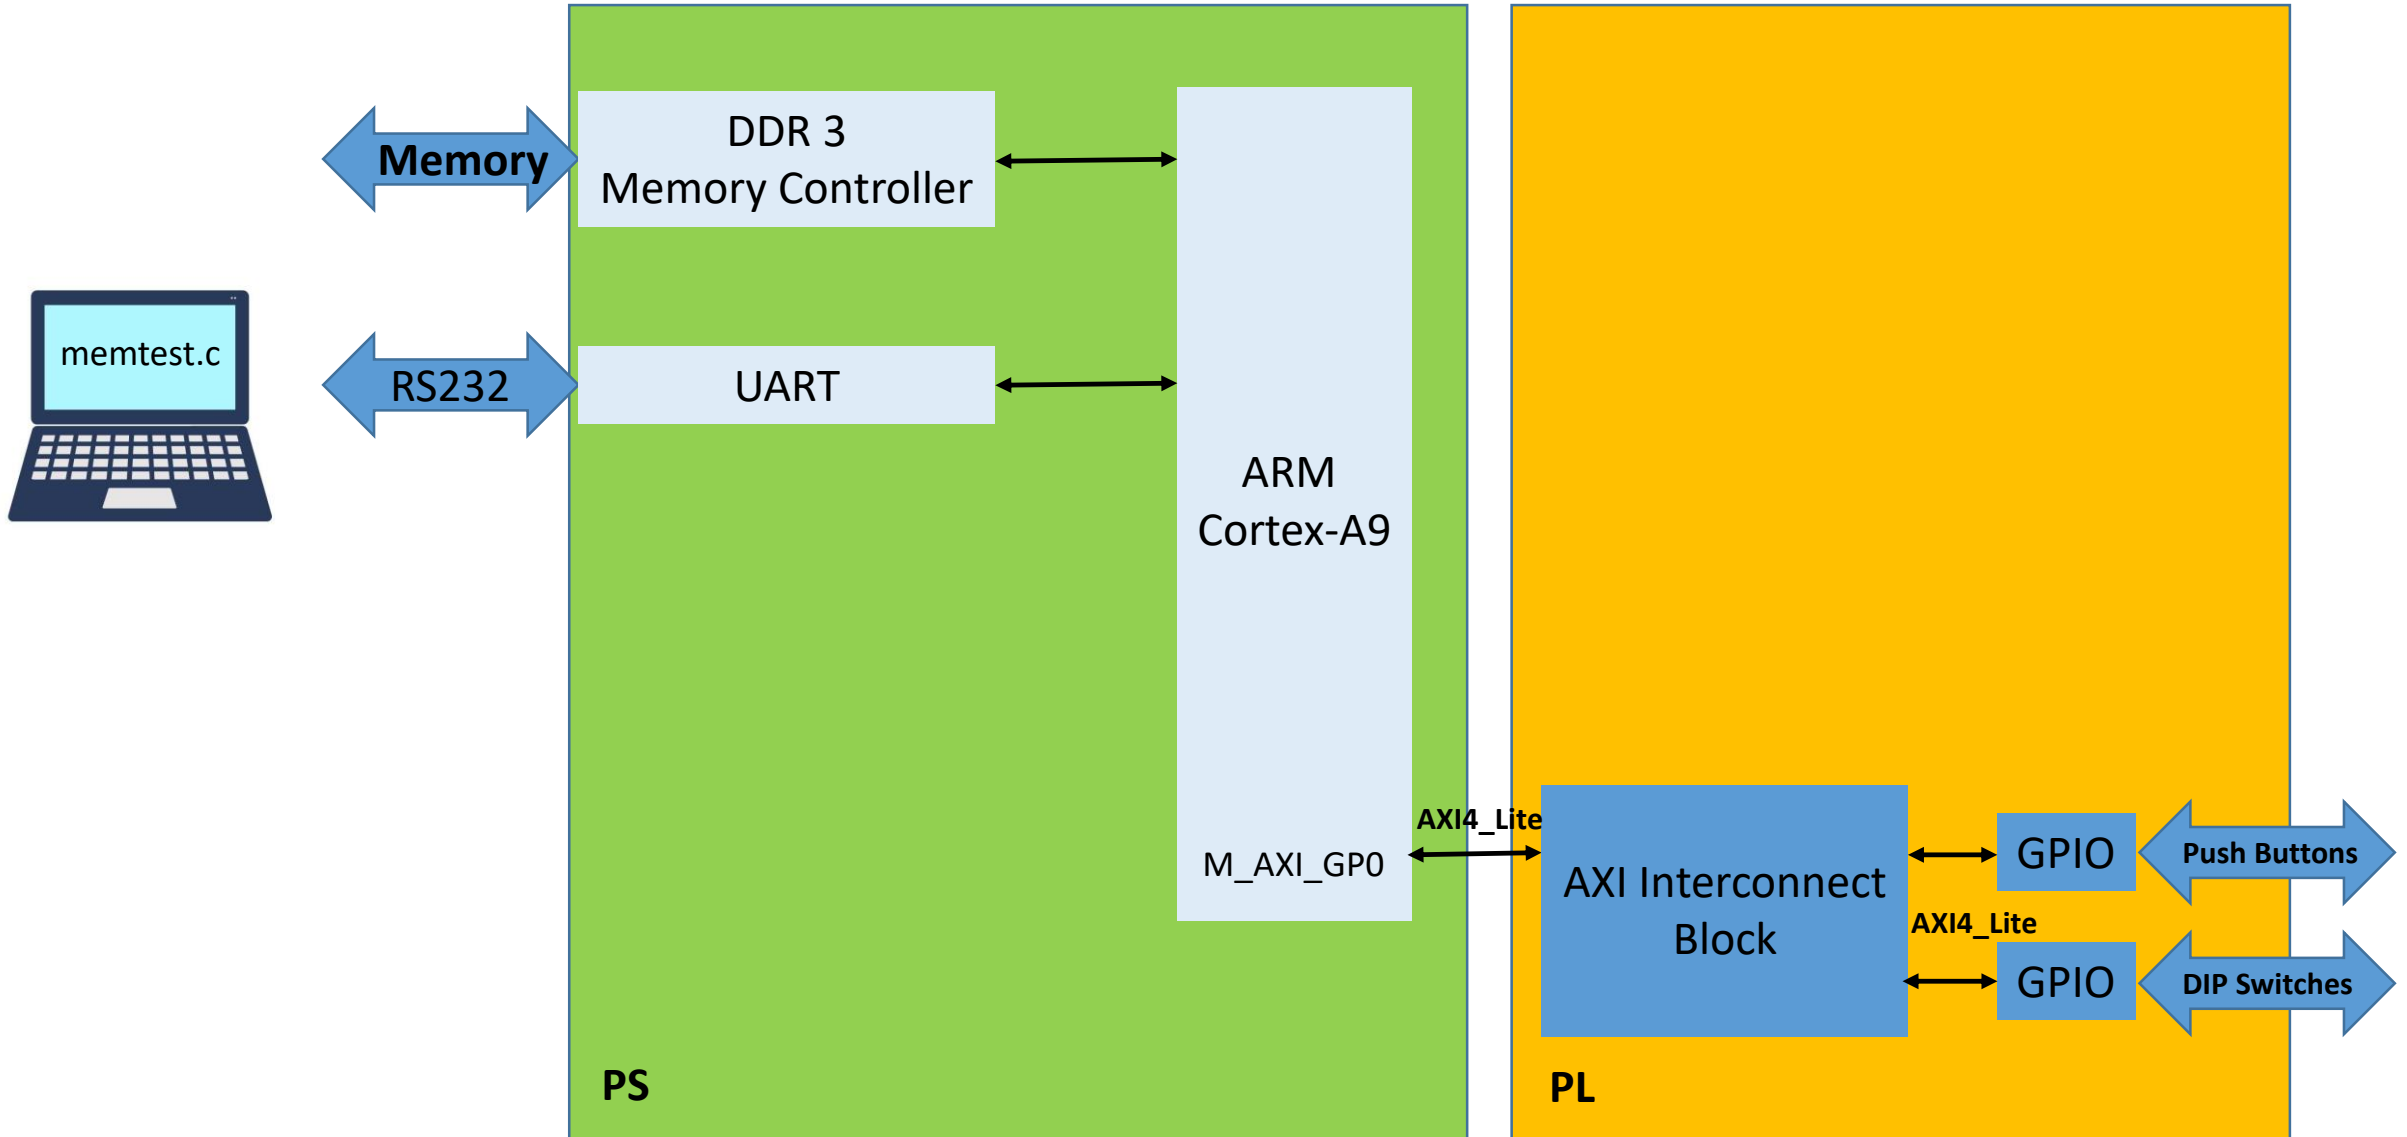

Zybo Lab 1 Design Flow Overview

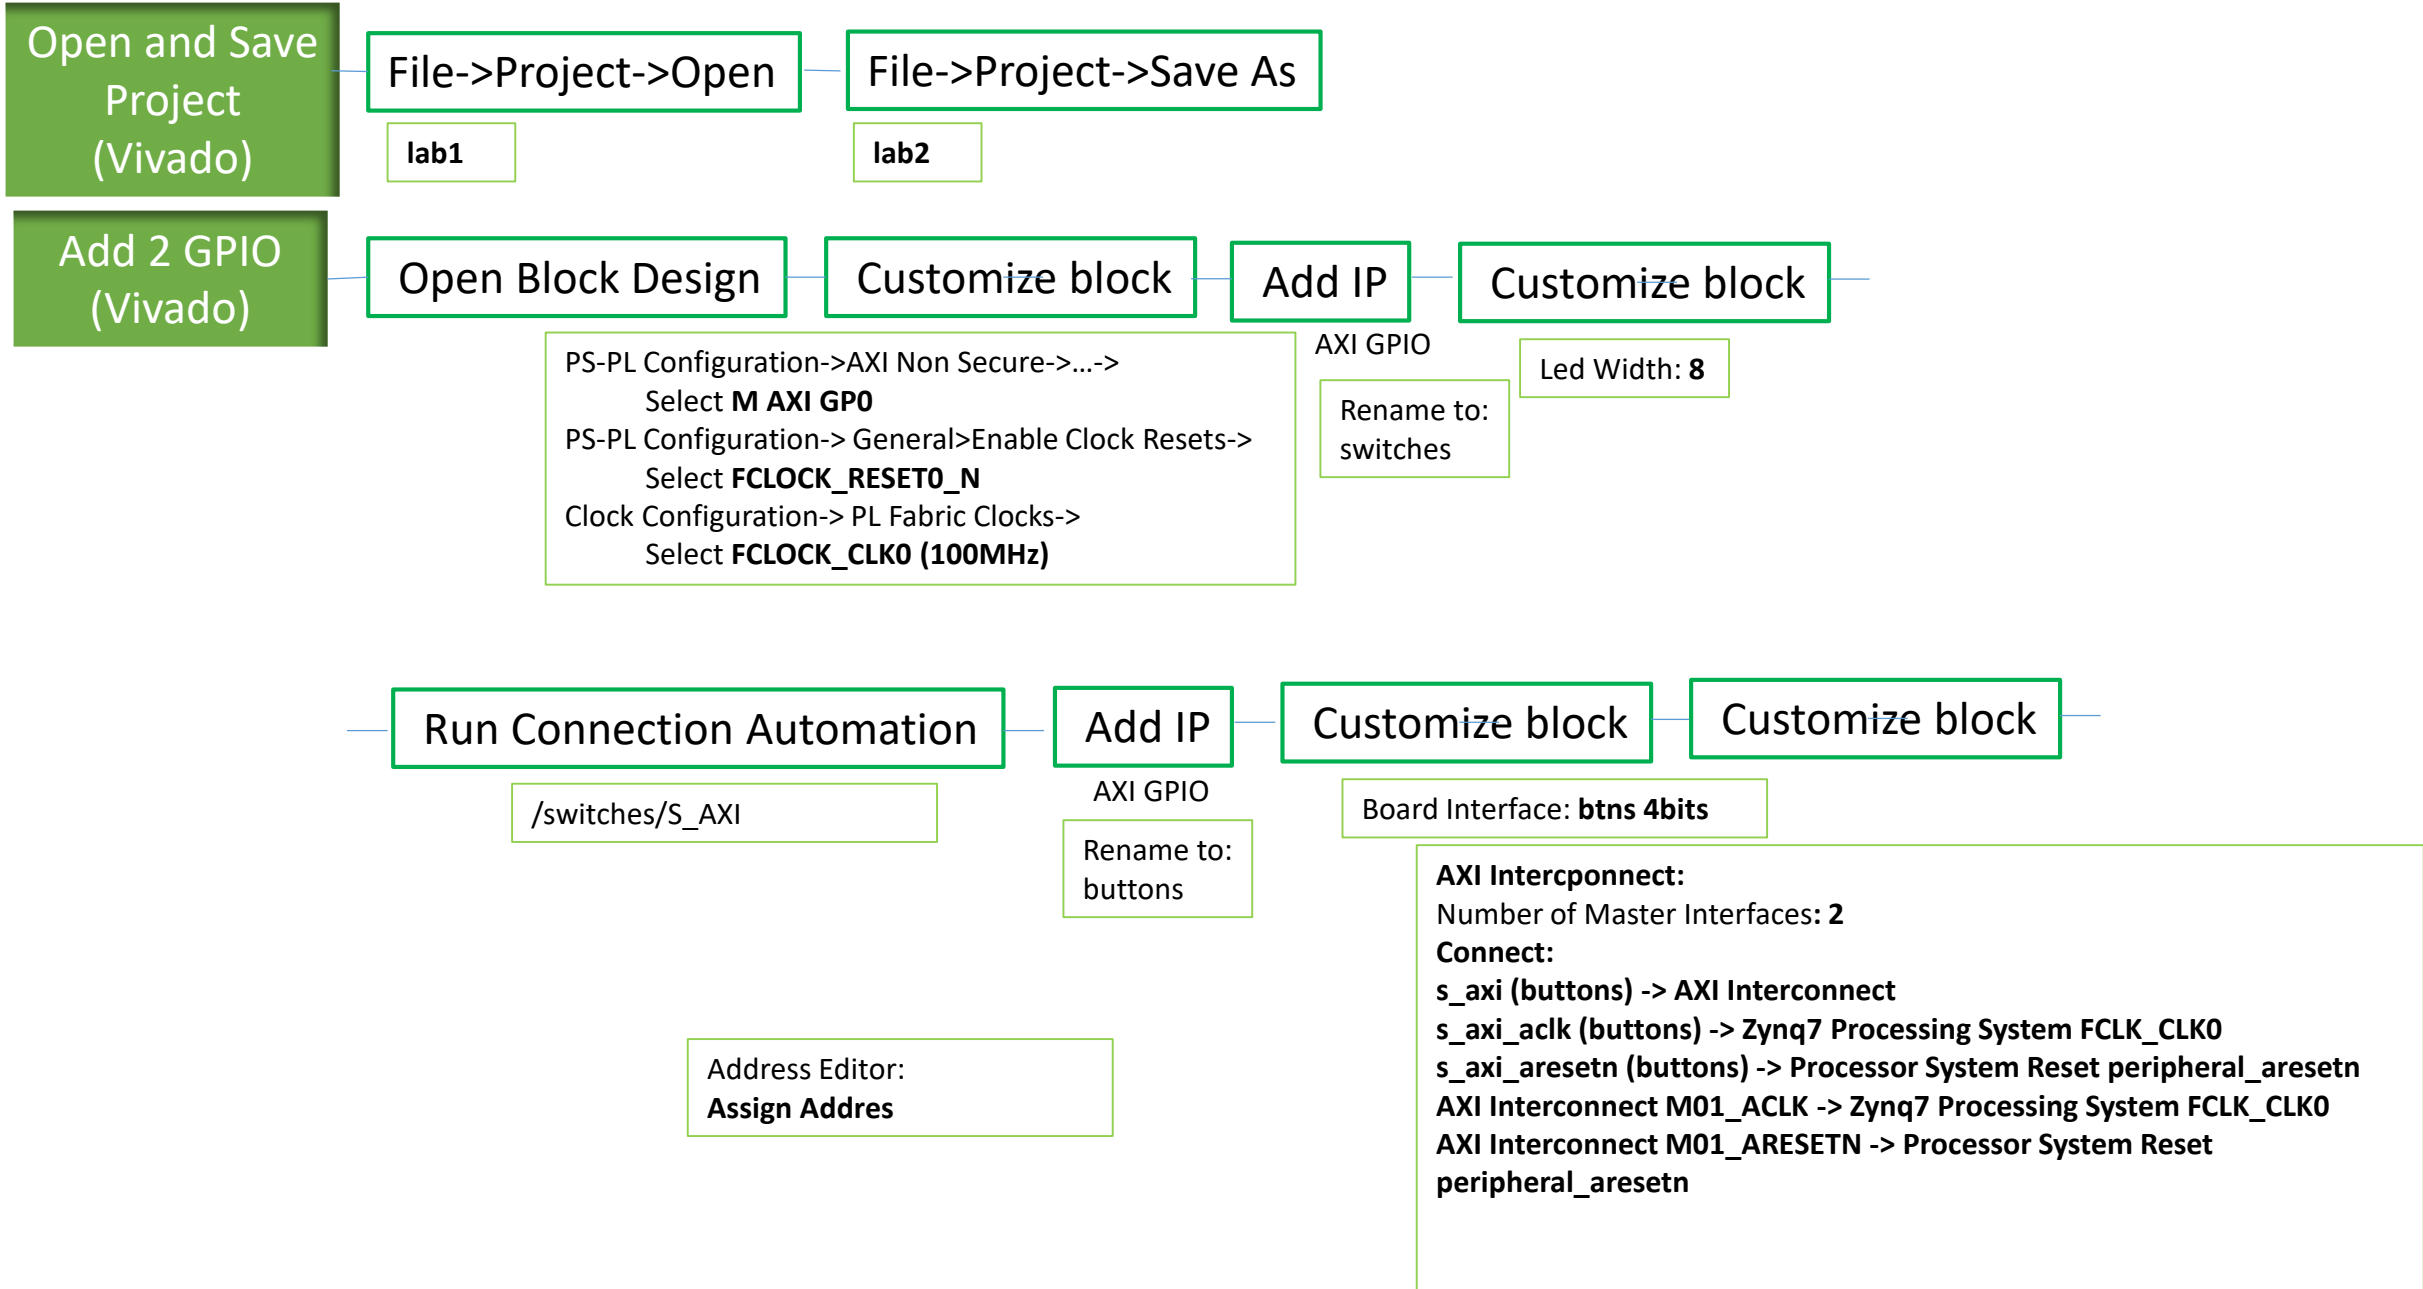

Zybo Lab 1 Design Flow Overview

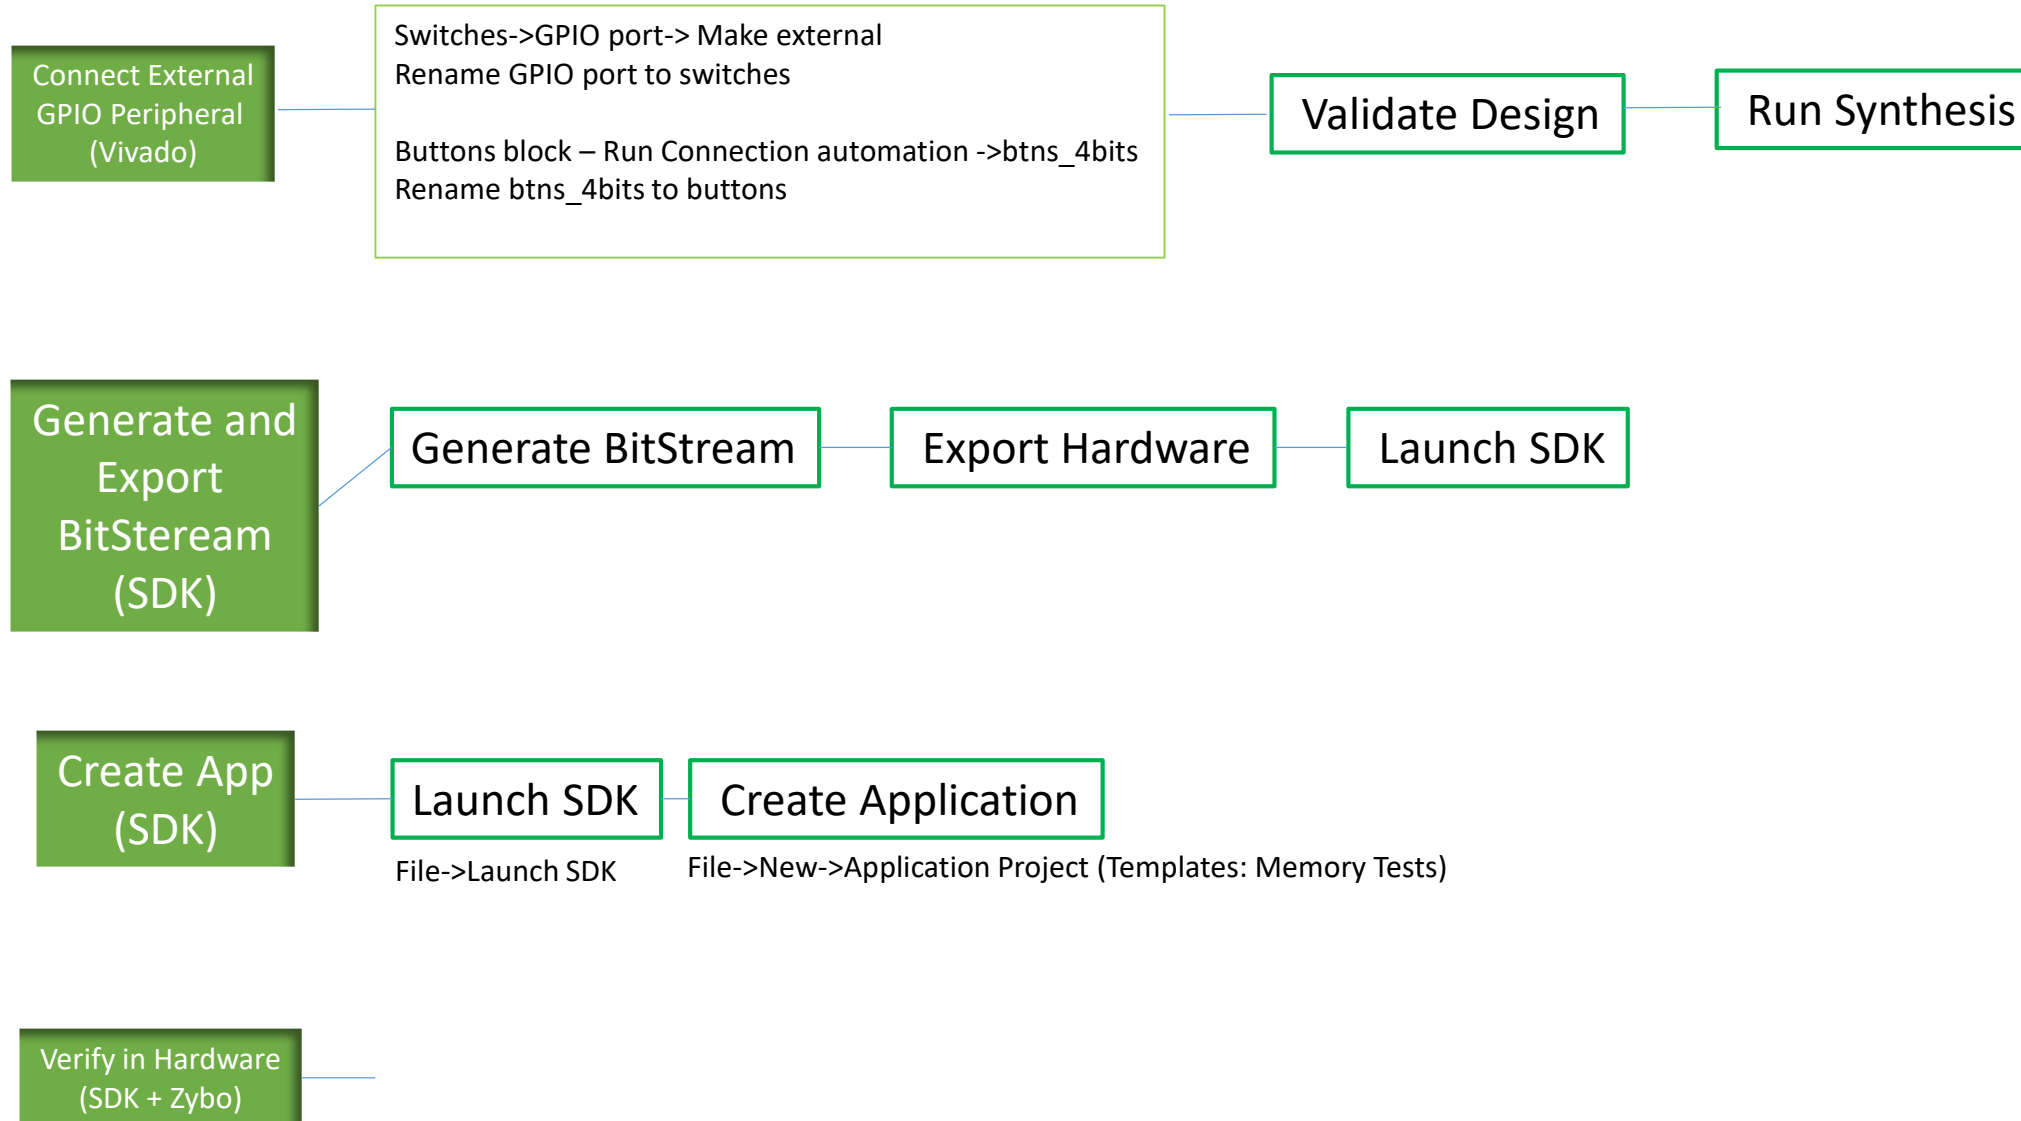

Zybo Lab 2 Design Flow Overview

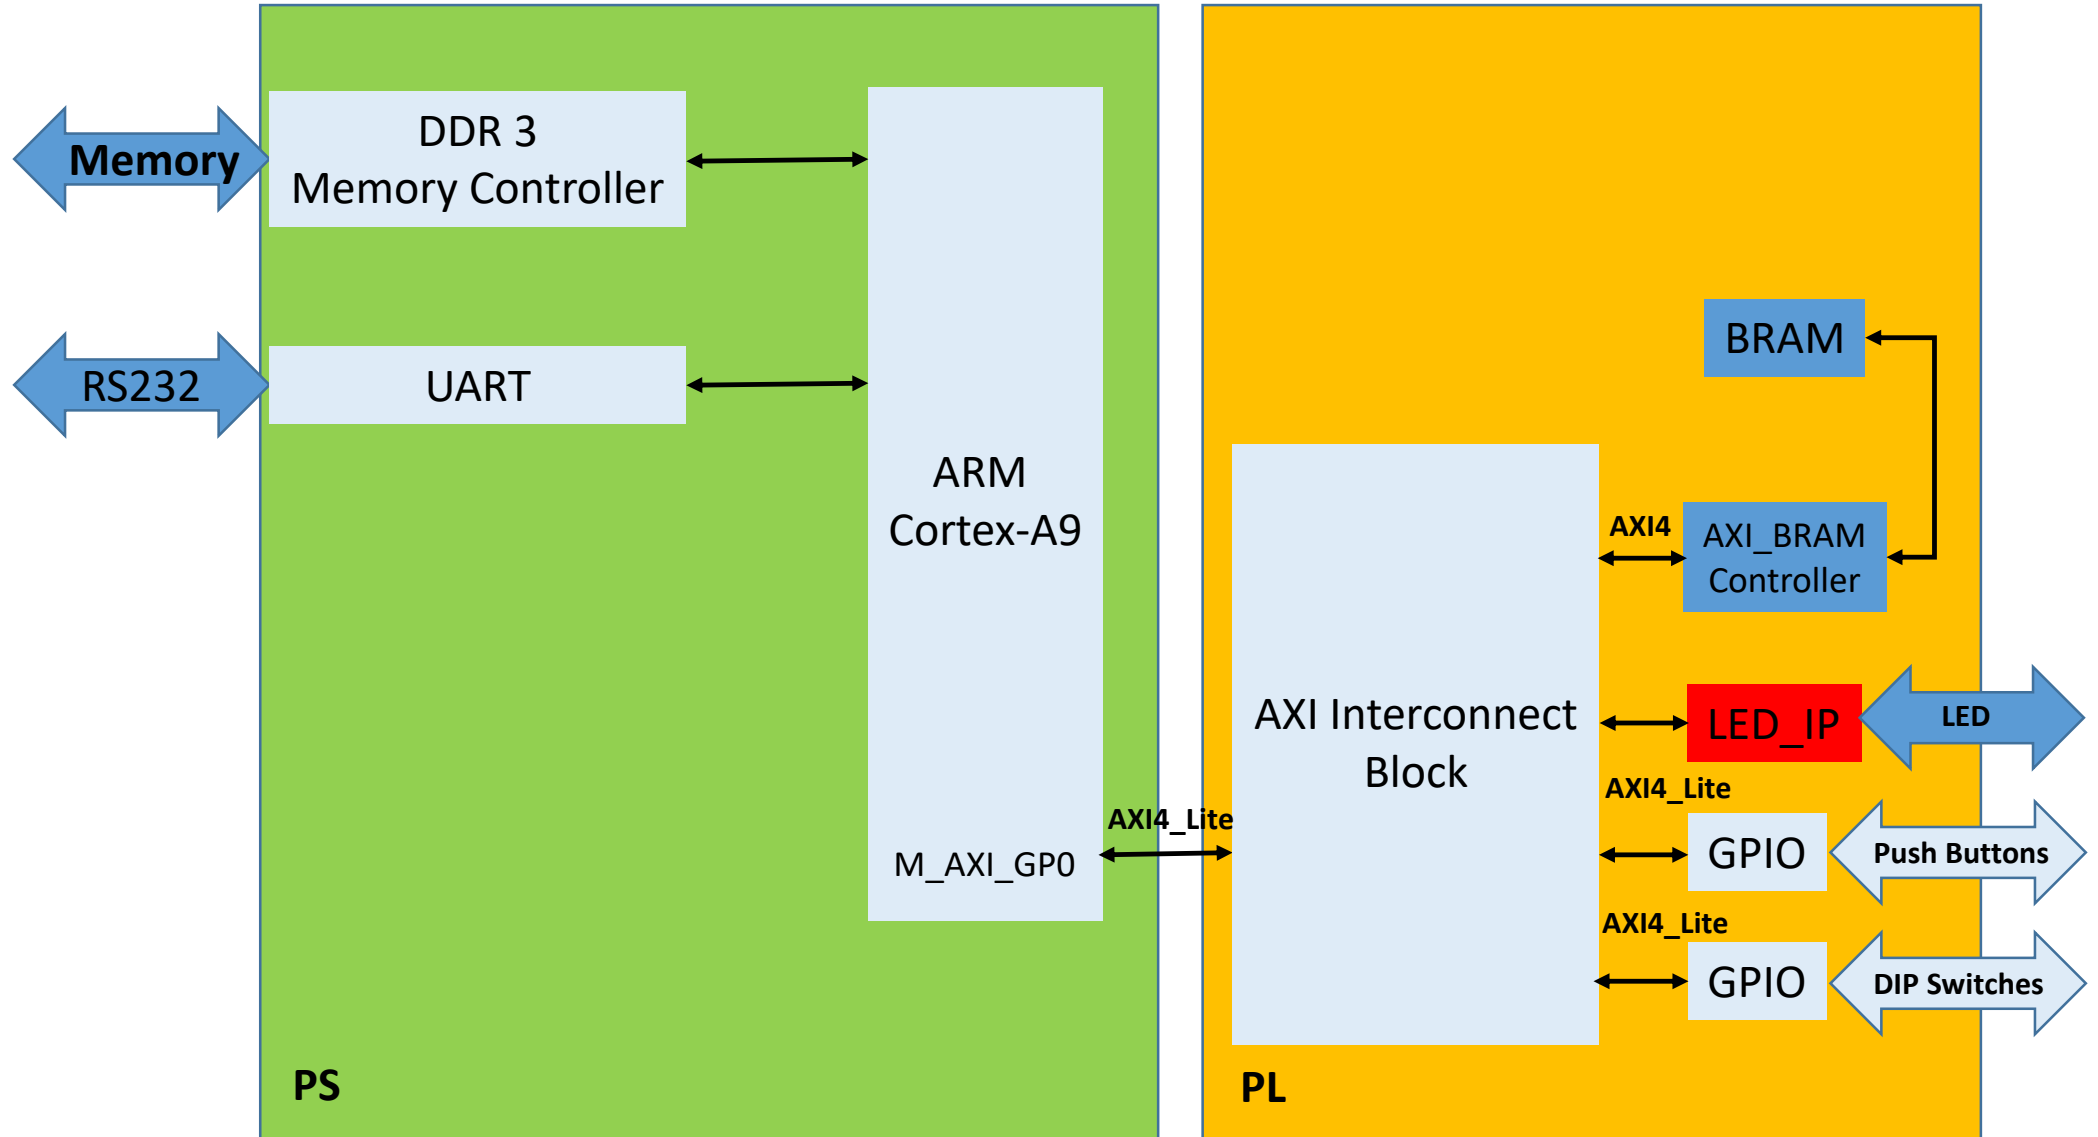

Zybo Lab 2 Design Flow Overview (a)

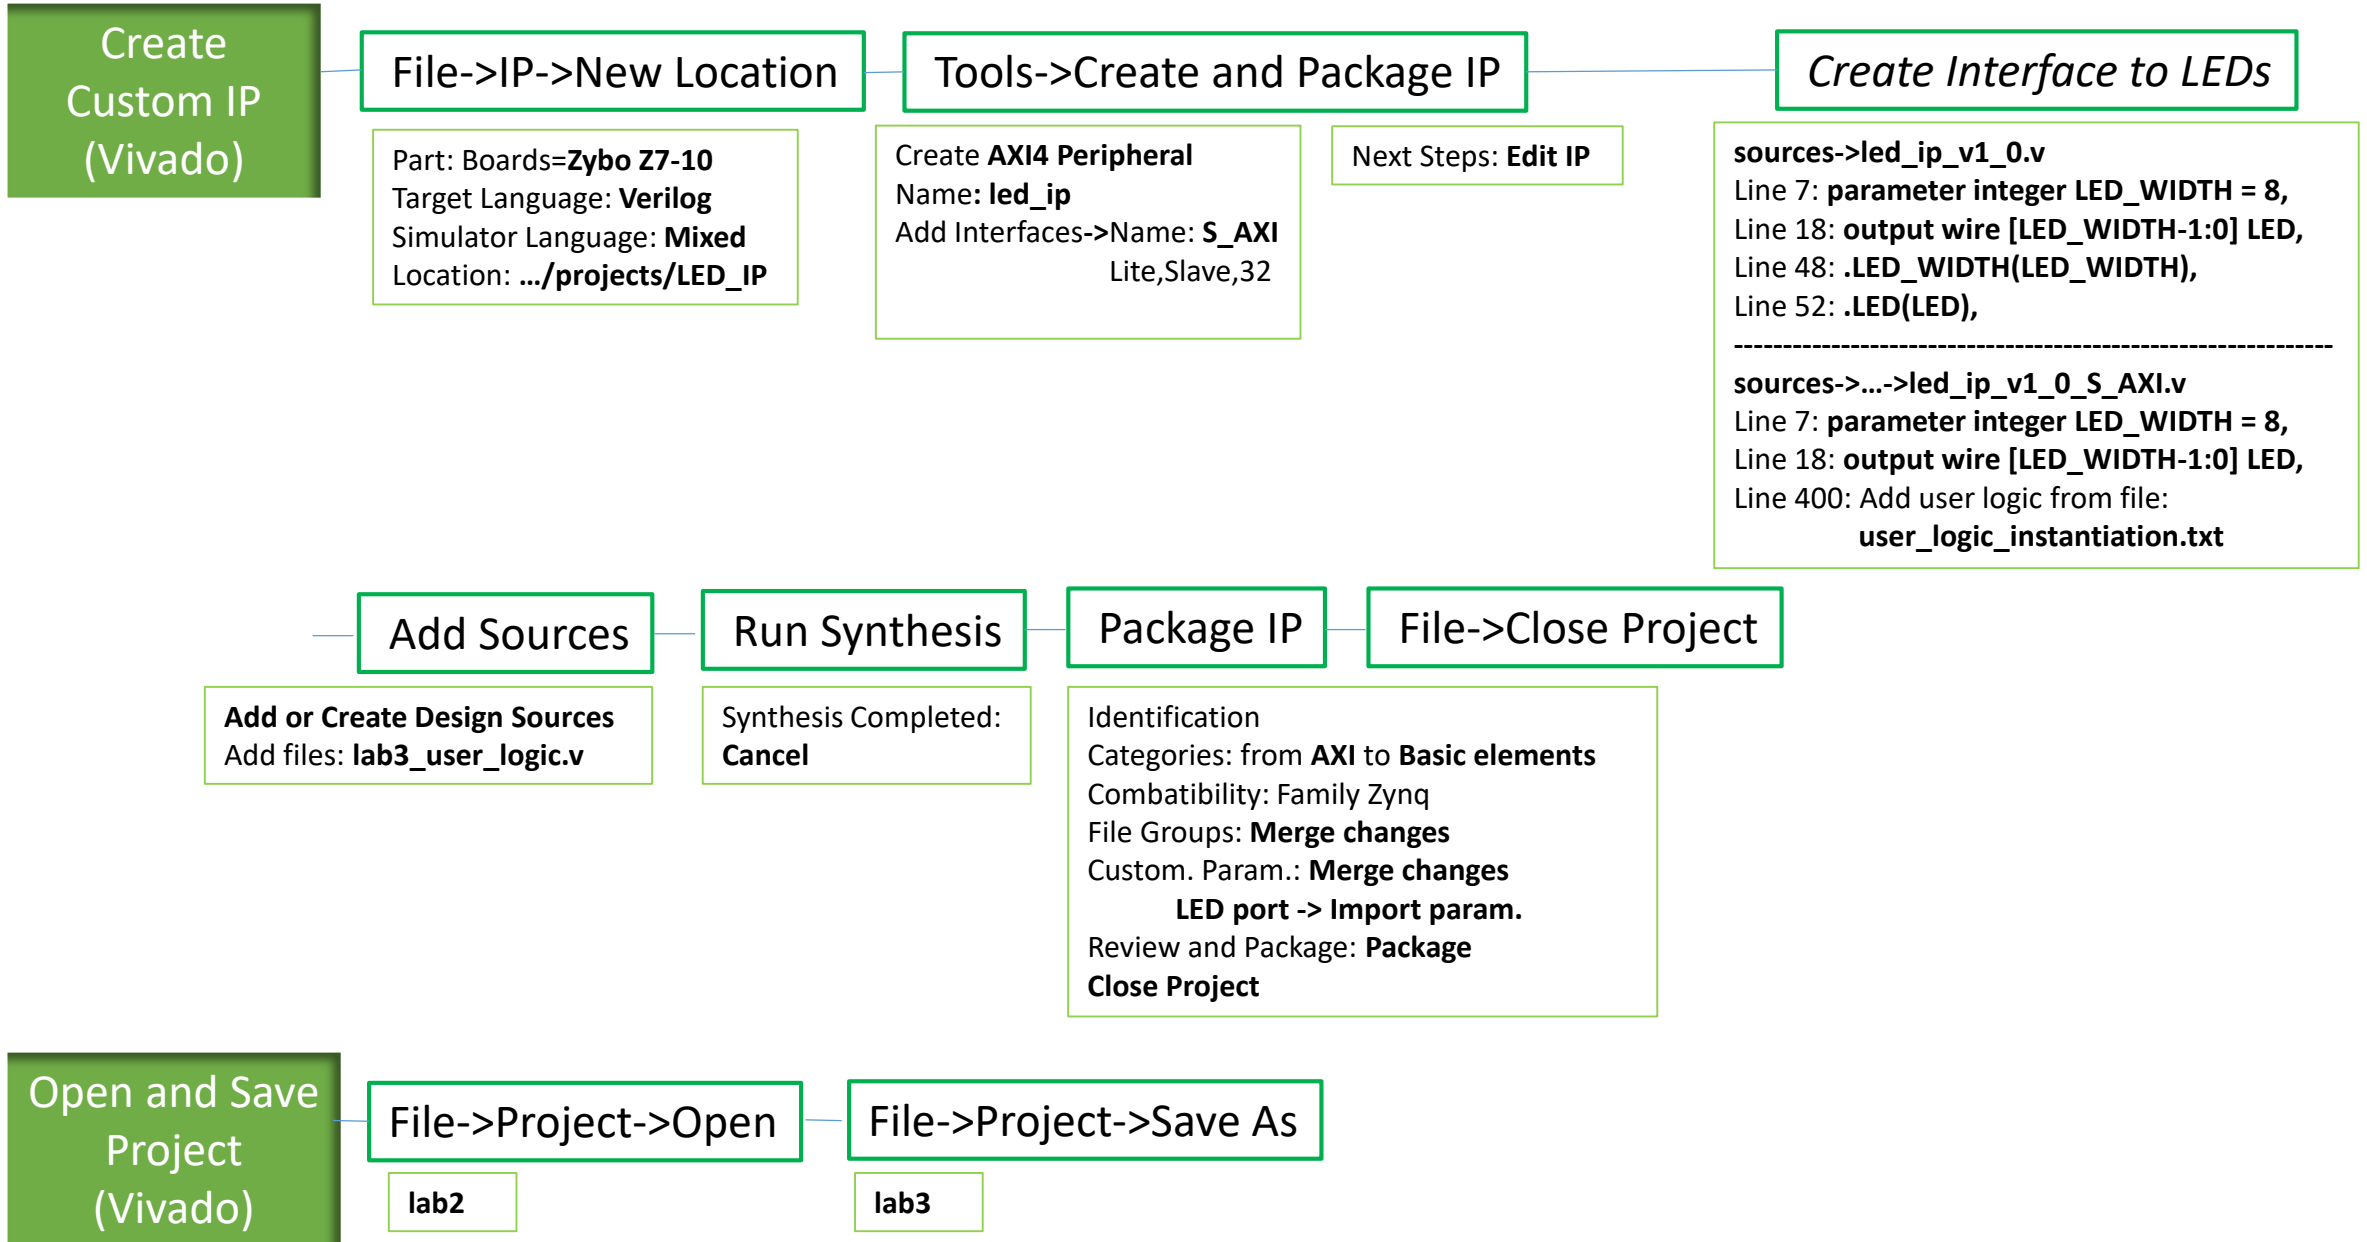

Zybo Lab 2 Design Flow Overview (b)

Zybo Lab 3 Design Flow Overview

Zybo Lab 3 Design Flow Overview (a)

Zybo Lab 3 Design Flow Overview (b)

Set the Project Settings (Vivado)

Settings

IP->Repository>ip_repo/led_ip_v1.0

Add LED, BRAM, Constraints (Vivado)

Open Block Design

Add IP

led_ip_1.0
Rename to:
led_ip

Customize Block

LED width: 4

Run Connection Automation

led_ip/S_AXI

Make External

LED[3:0]

Add IP

AXI BRAM Controller

Run Connection Automation

axi_bram_ctrl_0/S_AXI

Customize Block

Number of BRAM Interfaces:1

Run Connection Automation

Generate Memory

Validate Design

Add Sources

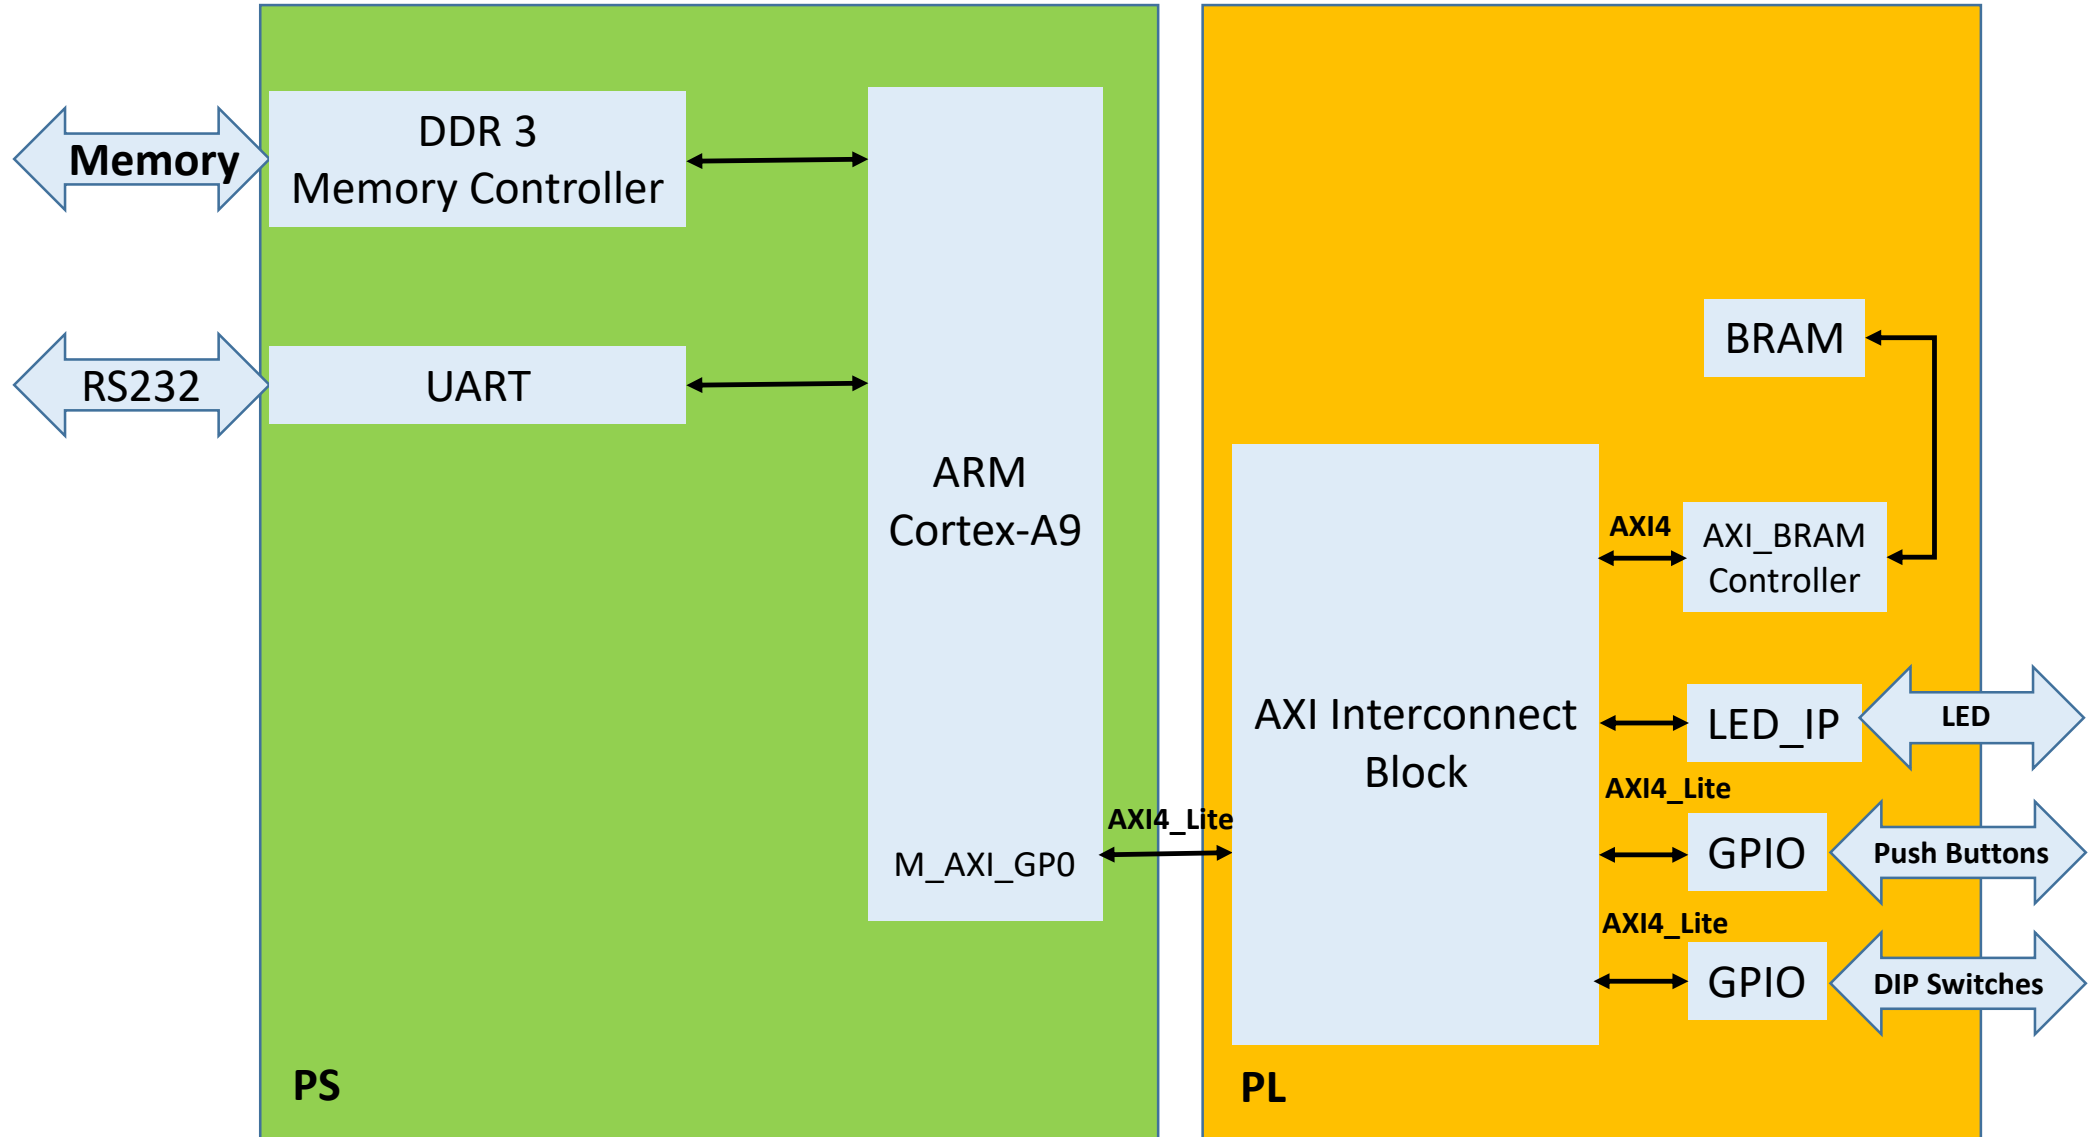

Add or Create Design Constraints
Add files: lab3_zybo.xdc

Generate Output Products

System.bd

Generate BitStream

Zybo Lab 4 Design Flow Overview

Zybo Lab 4 Design Flow Overview (a)

Open and Save Project (Vivado)

File->Project->Open

lab3

File->Project->Save As

lab4

Create App (SDK)

Export Hardware

File->Export->Export Hardware (include bitstream)

Launch SDK

File->Launch SDK

Create Application

Close Projects
File->New->Application Project: **lab4 - Empty**
lab4/src Import: **lab4.c**

Read Documentation

lab4_bsp/System.mss
Open xgpio.h

Edit lab4.c

```
Line 14: XGpio_Initialize(&dip, XPAR_SWITCHES_DEVICE_ID  
Line 17: XGpio_Initialize(&push, XPAR_BUTTONS_DEVICE_ID);
```

```
lab4_bsp->Settings  
View: projects\led__ip\ip_repo\led_ip_2.0\drivers\led_ip_v1_0\src
```

```
Line 3: #include "led_ip.h"  
Line 29: LED_IP_mWriteReg(XPAR_LED_IP_S_AXI_BASEADDR, 0, dip_check);
```

Analyze Object (SDK)

Tools->Launch Shell

```
cd lab4\Debug  
arm-xilinx-eabi-objdump -h lab4.elf
```

Verify in Hardware (SDK + Zybo)
